1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8, 10, and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Becker (USPN 5,316,379).

Becker teaches a power steering control system for front and rear wheels integrated with an anti-lock braking system that suppresses the effects of a difference between driving and braking forces in the left and right wheels and to reduce the effect of yaw moment imparted on the vehicle. It includes a steering assist system responsive to a shift in vertical loads between left and right wheels as detected by steering sensors, brake sensors and wheel speed sensors.

3. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Amberkar (USPN 6,062,336).

Amberker teaches a power steering control system, integrated with anti-lock braking and traction control systems, that suppresses the effects of a difference between driving and braking forces in the left and right wheels and to reduce the effect of yaw moment imparted on the vehicle. It includes a steering assist system responsive to a shift in vertical loads between left and right wheels as detected by steering sensors and wheel speed sensors.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Suissa and Kato each teach a steering control system designed to minimize the yaw effect.
